

Vulnerability Management

Managing regular and new security threats has become one of the most critical challenges for businesses.

The complexity of identifying and managing security risks within the environment can leave IT Teams to feel overwhelmed, resulting in missing fundamental information, such as:

- Existing assets
- Health of current assets
- Vulnerabilities within systems
- Misconfigures systems

The sheer volume will can generate too many alerts and lack of context. During the prioritisation stage, risks start to pile up leaving business vulnerable.

By 2023, organisations that implement specific and measurable security awareness programmes will experience **75%** fewer account takeover attacks than organisations that don't.

Adopting a managed risk solution enables your business to continuously scan the network, endpoints, and cloud environments 24/7.

With the help of Silverbug's security team, we will work directly with you to address the above known challenges, discover risks beyond vulnerabilities, benchmark your current infrastructure and produce a risk management process for remediation.

By understanding where your business is regularly

exposed, we will provide strategic recommendations to improve your overall security posture over time.

- ✓ **24/7 Proactive Monitoring**
- ✓ **Risk Prioritisation**
- ✓ **Actionable Reporting**
- ✓ **Guided Remediation**
- ✓ **Strategic Recommendations**

Vulnerability Management Capabilities

Cyber risk never goes away and if we aren't aware of it, we can't work to mitigate it.

By having a dedicated security team that will assess and manage vulnerabilities while monitoring your environment will help your organisation to reduce the threat surface.

External Vulnerability Assessment

- Continuous scanning of external-facing assets
- Cloud Security Posture Management (CSPM)
- Account takeover risk detection
- OWASP top-10 scanning
- Automated sub-domain detection

Quantify Your Cyber Risk Posture

- Comprehensive risk profiling
- Informative user interface
- Proactive notifications and alerts
- Actionable reporting
- API integrations

Host-based Vulnerability Assessment

- Endpoint agents for Windows Server/workstation, MacOS, and Linux distributions
- Proactive endpoint risk monitoring
- Audit reporting
- Security Controls Benchmarking

Internal Vulnerability Assessment

- Continuous scanning of internal assets
- Proactive risk monitoring
- Dynamic asset identification and classification
- Stateless scanning and secure transfers

Silverbug's security team will work closely with your organisation to prioritise and identify security risks and close the security gaps within your network and Cloud infrastructure.
